Project Title	Project- Drug Traceability

Interact with the frontend For All Functionalities:

Creating a complete frontend program for drug traceability using blockchain is a complex and multifaceted task that involves multiple functionalities. Below is a simplified example of how you can structure a frontend program for drug traceability using a web-based interface.

Program:

```
<!DOCTYPE html>

<html>

<head>

  <title>Drug Traceability Dashboard</title>

  <!-- Add your CSS styles here -->

  <link rel="stylesheet" type="text/css" href="styles.css">

</head>

<body>

  <header>

    <h1>Drug Traceability Dashboard</h1>

  </header>

  <nav>

    <!-- Add navigation links to different functionalities -->

    <ul>

      <li><a href="#search">Search Drug</a></li>

      <li><a href="#track">Track Drug</a></li>

      <li><a href="#verify">Verify Drug</a></li>

      <!-- Add more links as needed -->

    </ul>
```

```
</nav>

<main>

  <section id="search">
    <h2>Search Drug</h2>
    <!-- Implement search functionality here -->
    <input type="text" id="searchInput" placeholder="Enter Drug ID">
    <button onclick="searchDrug()">Search</button>
    <div id="searchResults">
      <!-- Display search results here -->
    </div>
  </section>

  <section id="track">
    <h2>Track Drug</h2>
    <!-- Implement drug tracking functionality here -->
    <input type="text" id="trackInput" placeholder="Enter Drug ID">
    <button onclick="trackDrug()">Track</button>
    <div id="trackHistory">
      <!-- Display tracking history here -->
    </div>
  </section>

  <section id="verify">
    <h2>Verify Drug</h2>
    <!-- Implement drug verification functionality here -->
    <input type="text" id="verifyInput" placeholder="Enter Drug ID">
    <button onclick="verifyDrug()">Verify</button>
    <div id="verificationResult">
      <!-- Display verification result here -->
    </div>
  </section>

  <!-- Add more sections for additional functionalities as needed -->

</main>

<footer>
```

<!-- Add footer content if necessary -->

</footer>

<!-- Add your JavaScript script for frontend functionality -->

<script src="script.js"></script>

</body>

</html>
